

THE BAT CARS

The Alfa Romeo Giulietta SS was derived from Bertone's early experiments into aerodynamics using the Alfa 1900 floor pan to build the famous BAT cars. Ultimately Alfa Romeo expressed interest in racing and producing a variant of these which lead to the 1300 Giulietta Sprint Speciale. The car was not successful in racing but they went into limited production and later had the engine size increased to 1600cc as the Giulia SS.

BAT 9

BAT 5

BAT 7

The Giulia SS story will be continued. The car is currently having a complete mechanical rebuild.
